
Agisoft Metashape Professional 1.6.0 Crack MacOS MacOSX

Even though my MacBook Pro has 32 GPU cores, Metashape only uses one of them. It used to be on my old Mac Pro and that seems to be why Mac . But right now I'm on Windows. I would like to use it for something like photoshop. But it doesn't start even though I started it. Run from command line on Windows: metashape --console It's starting. But then I can't open the window because it gives me an error: Error: The file cannot be opened because it does not exist. I've had no luck checking where the file is because it won't open. But I'm sure the file exists. What am I doing wrong?
